Open in Library Viewer

Browse covers, stats and orders in a new tab

Recommended

Download JSON file

Save the data to your computer

JSON

CSV

TXT

You can also download your data as JSON, CSV or TXT from the Library Viewer at any time.

Close

Before you start

- 1

Install the extension

From the Chrome Web Store. It works in Chrome and in Chromium browsers such as Edge, Brave and Opera.
- 2

Pin it

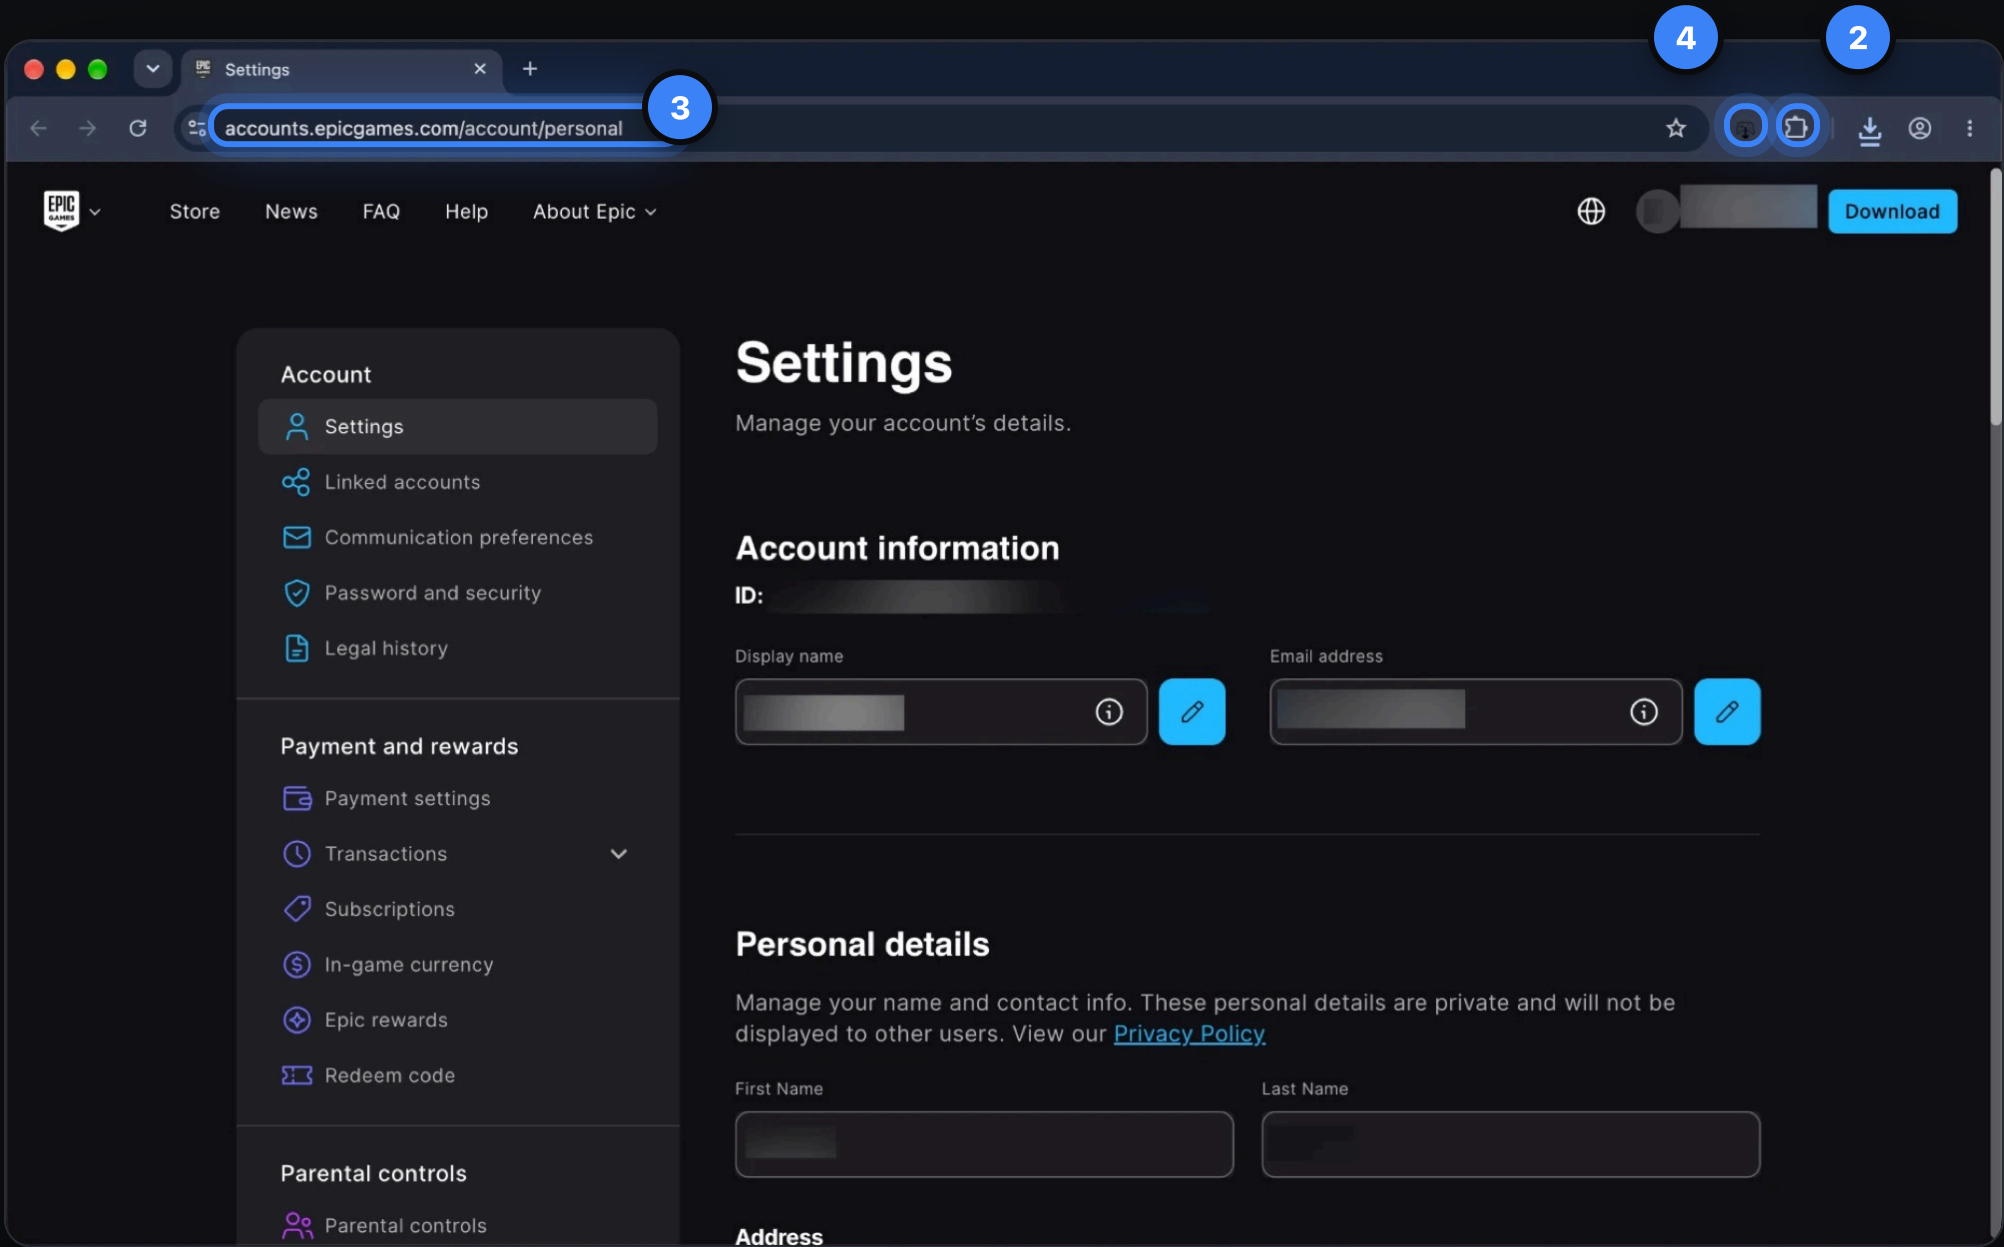

Click the puzzle icon in the toolbar, then the pin next to Epic Games Library Exporter.
- 3

Open your Epic account

Go to accounts.epicgames.com/account and sign in as usual.
- 4

Click the extension

Its icon opens the export options in a window on the page.

Choose what to export

- 1

Purchase dates
Leave "From" empty to export everything, or pick a range.
- 2

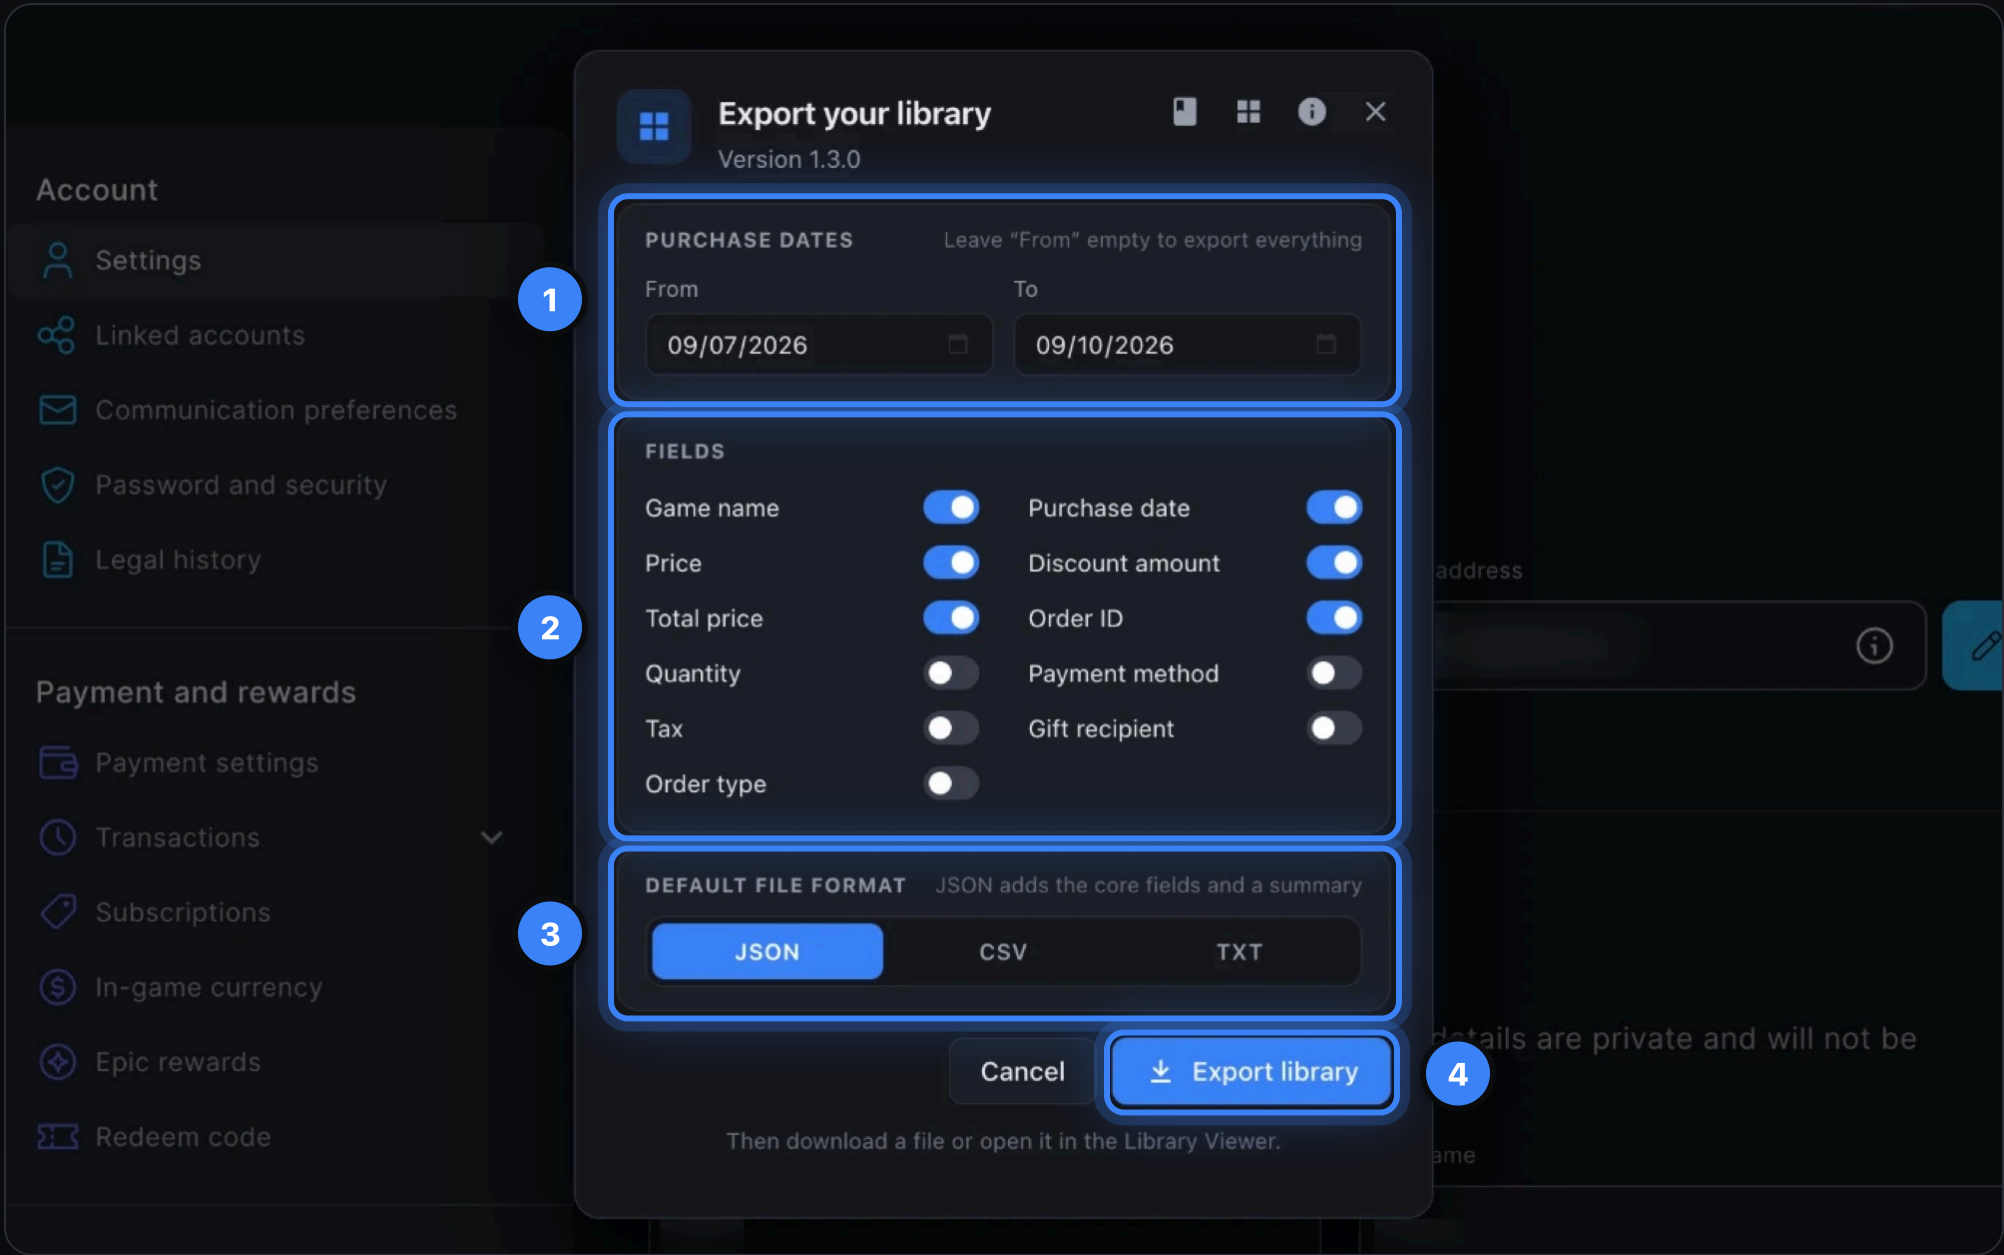

Fields
Turn on the details you want: price, discount, total, order ID, payment method, tax, gift recipient and more.
- 3

Default file format
JSON, CSV or TXT. You can still change it at the end.
- 4

Export library
Starts the export. The same window switches to the progress.

i

Your choices are saved for next time. The buttons at the top open this guide, the Library Viewer and the About page. Clicking the icon again closes the window.

Watch it work

Keep the tab open until it finishes. Most libraries take less than a minute.

- 1

Real progress
The bar follows how much of your history has been read. It never jumps backwards.
- 2

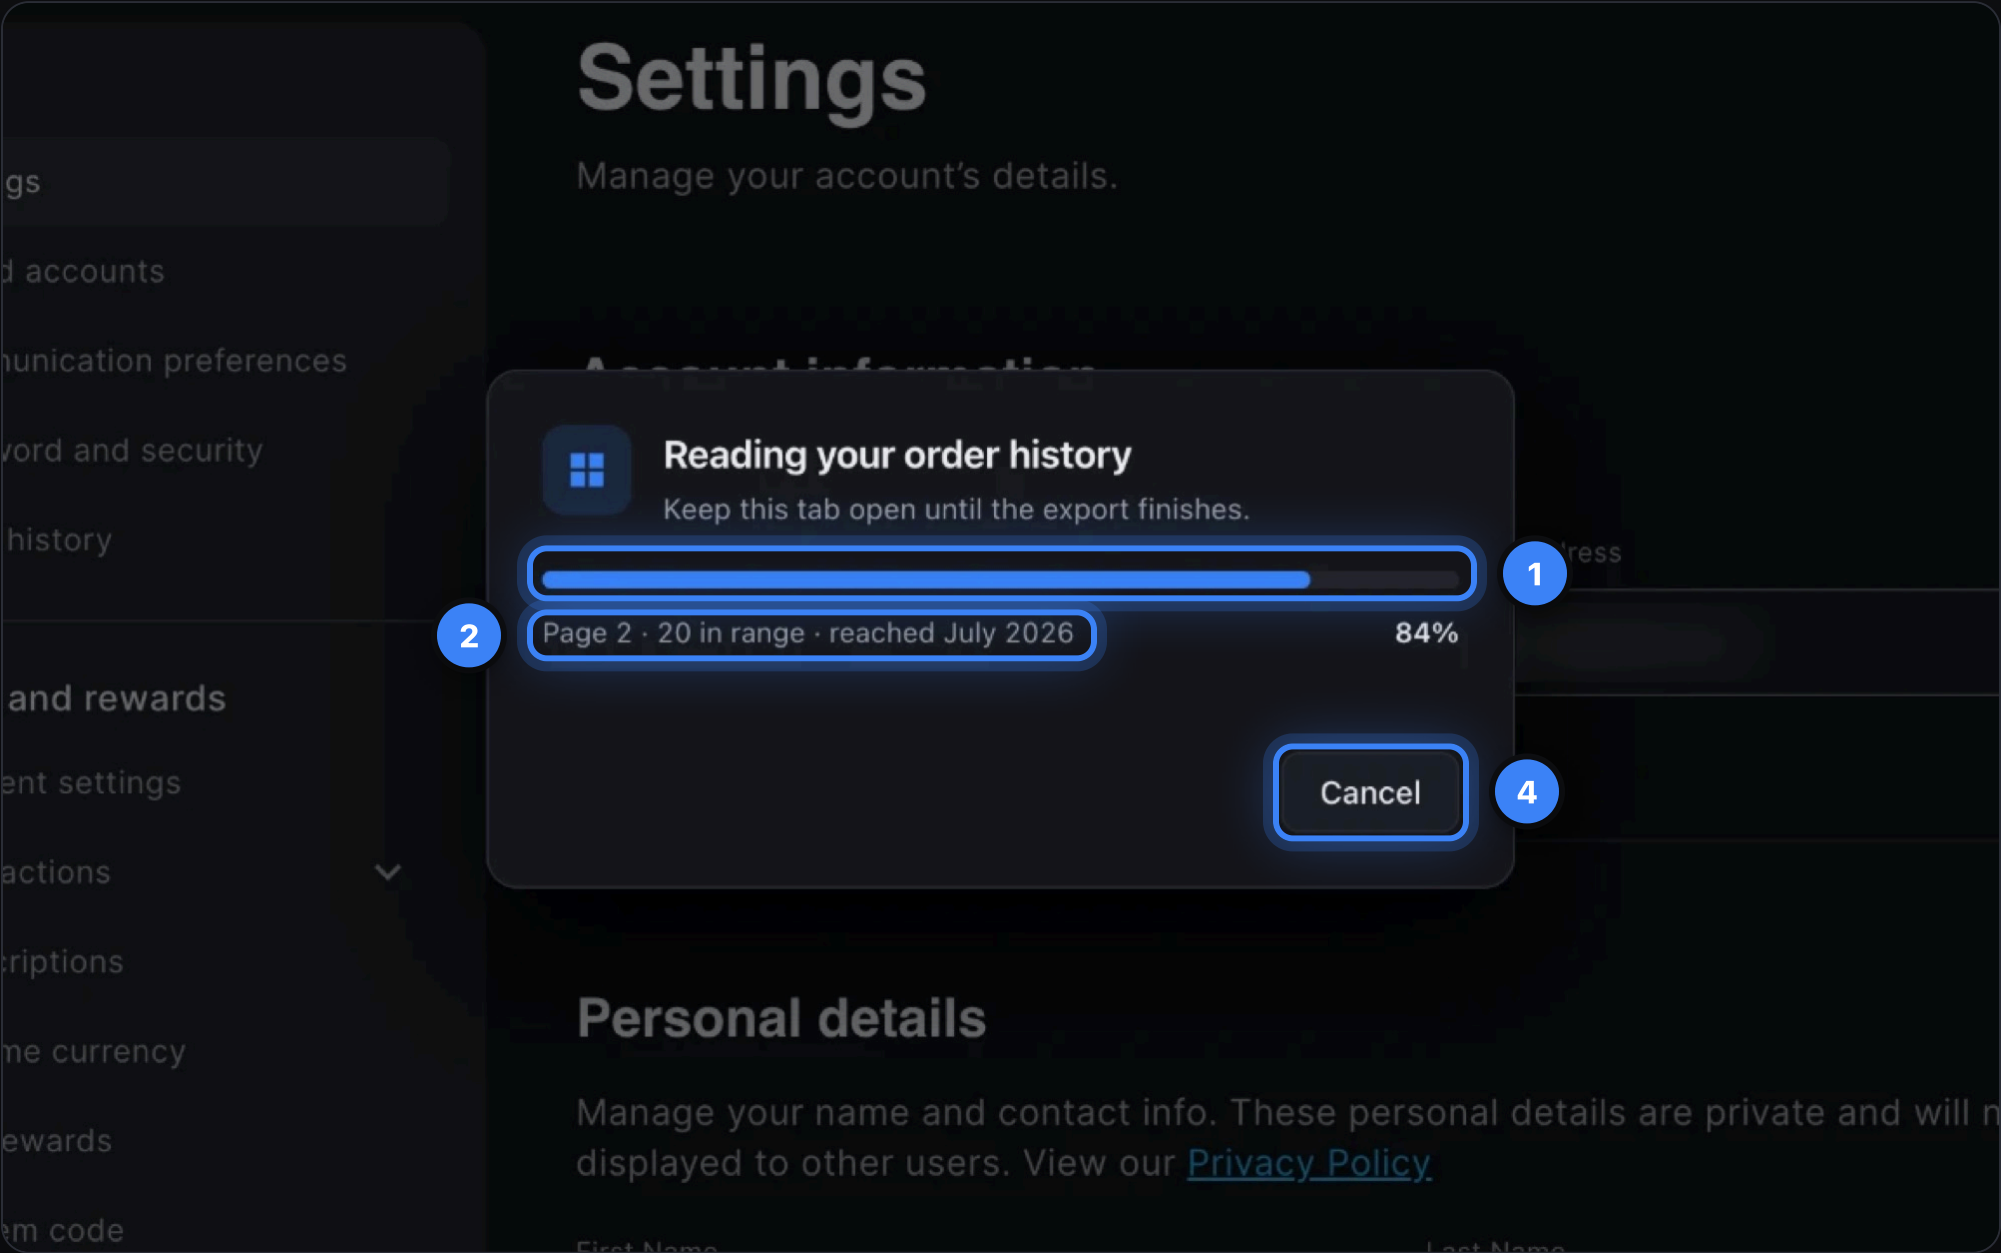

Where it is
The page number, how many orders so far, and how far back it has reached.
- 3

Time left
Based on how fast Epic is answering right now.
- 4

Cancel
Stop at any time; nothing is saved.

i

The first full export estimates. After that the extension knows the size of your library, so the bar is almost exact.

Open it or download it

- 1

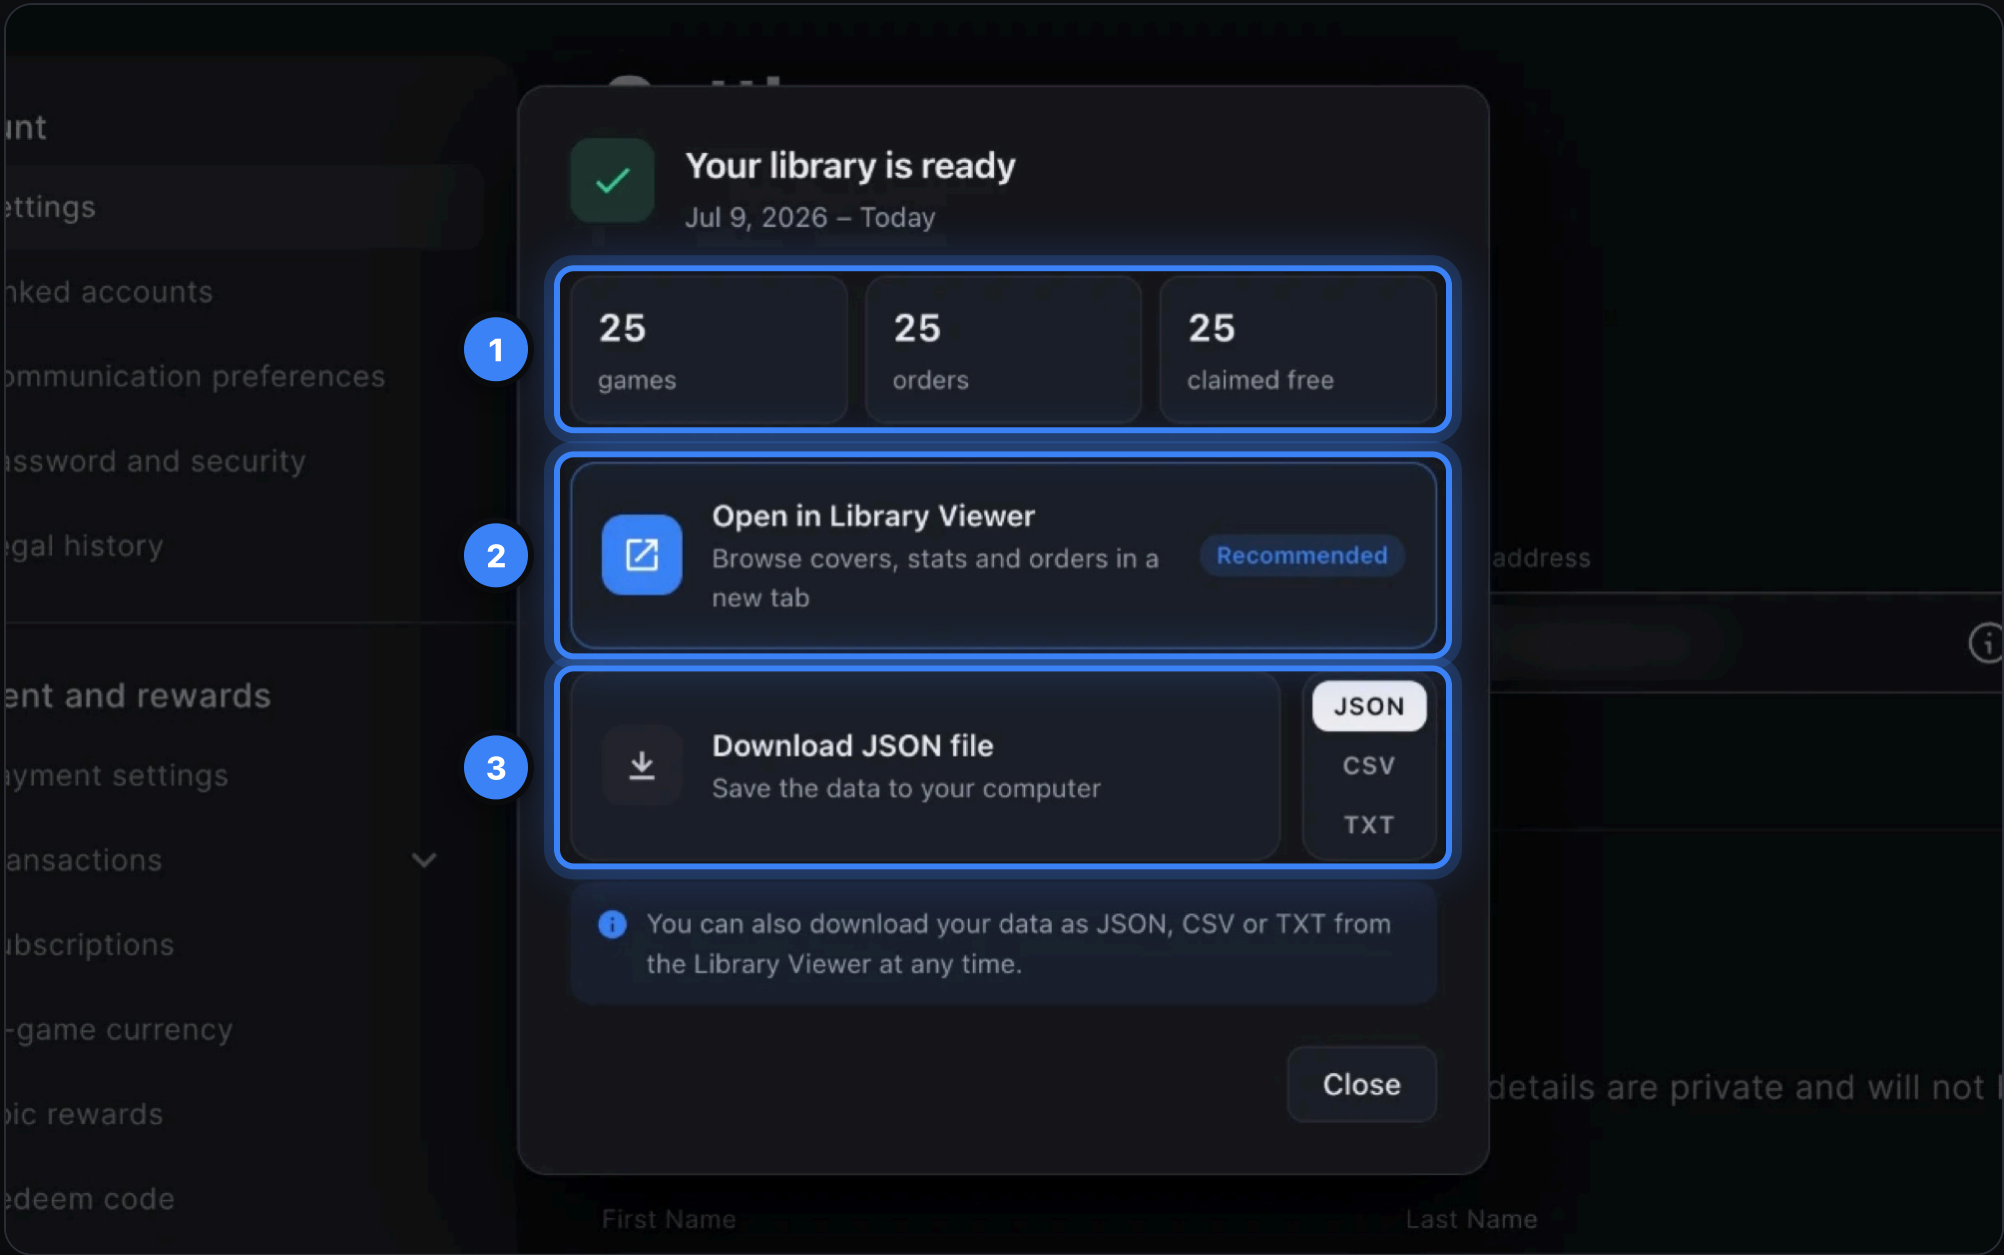

Summary
How many games and orders were found, and how many you claimed for free.
- 2

Open in Library Viewer
Recommended. Your library opens in a new tab with covers and stats, with no file to save.
- 3

Download file
Pick JSON, CSV or TXT on the right, then download.

Not sure? Open it in the Library Viewer. You can download the same files from there at any time.

Your file is saved

The file goes to your Downloads folder as **My_Epic_Games_Library** (.json, .csv or .txt).

- 1

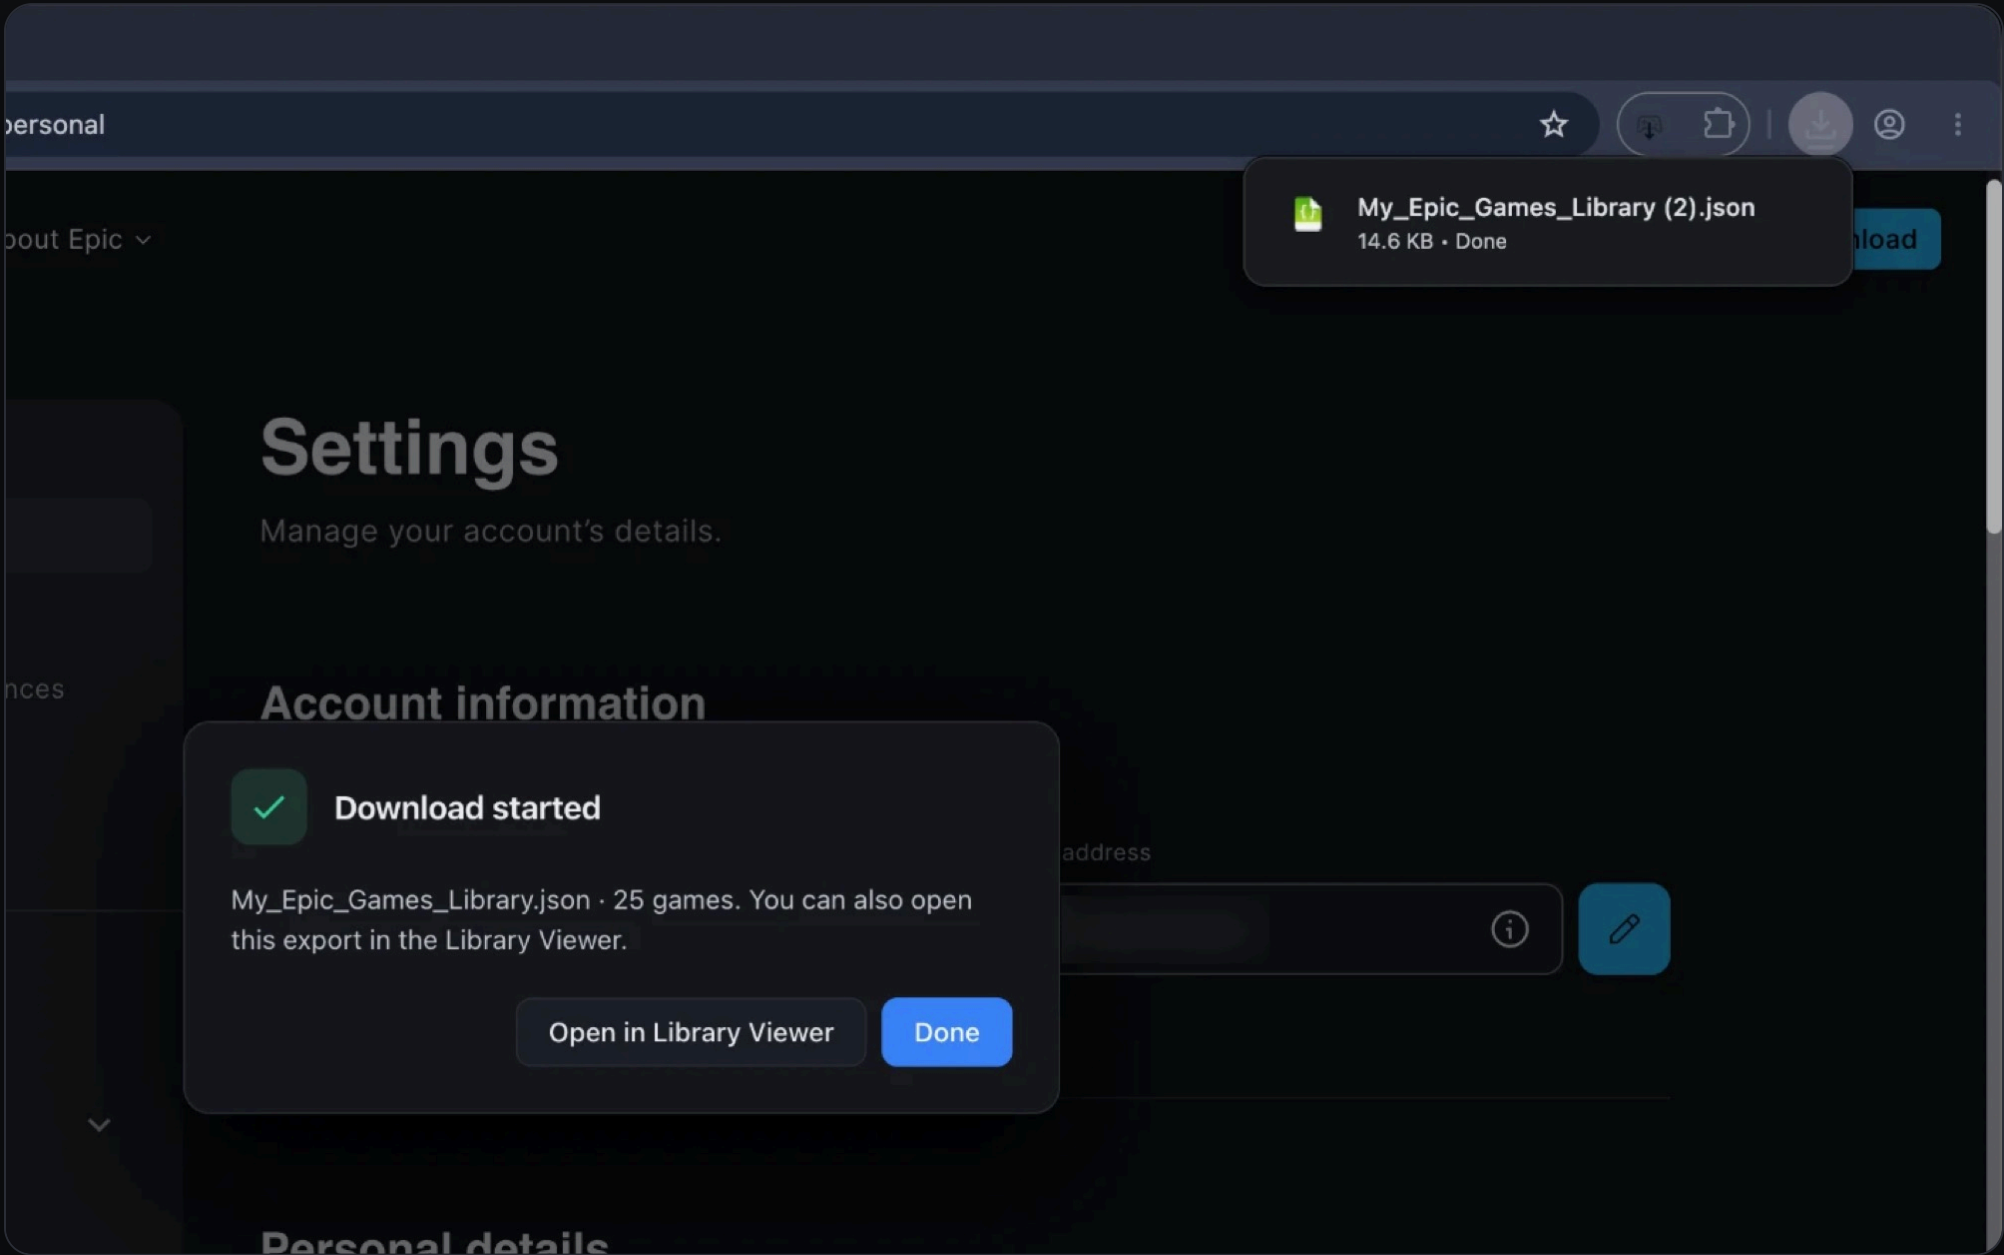

JSON
Structured: orders with their games, numeric amounts, IDs and a summary. Best for keeping or for the Library Viewer.
- 2

CSV
Opens in Excel or Google Sheets, one row per game.
- 3

TXT
Plain text, one line per game.

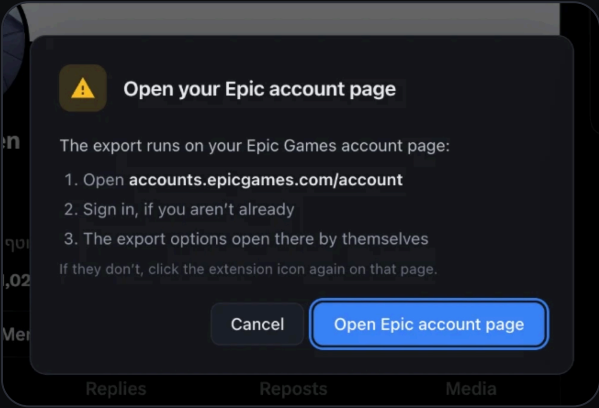

i

You can drop any of these files onto the Library Viewer later.

If something goes wrong

The extension tells you what happened and what to do, right on the page.

Wrong website? The extension shows a message with a button to your Epic account page, and the options open there. From Chrome's own pages, like settings or the Web Store, it goes straight there.

Nothing happens? Reload the Epic page and click the extension again.

 **You're not signed in**

Sign in to your Epic Games account in this tab, then export again.

Close

Reload page

Try again

Not signed in

Your Epic session expired. Sign in again in the same tab, then click **Try again**.

 **Reading your order history**

Keep this tab open until the export finishes.

Epic is busy, retrying in 5 seconds...

Cancel

Epic is busy

The extension retries on its own. If it still can't get through, wait a minute and try again.

 **No purchases found**

There are no orders from Jan 1, 2010 to Dec 31, 2010. Try a wider date range.

Close

Change dates

No purchases found

Nothing in the dates you picked. Click **Change dates** to widen the range, or clear "From" to export everything.

Good to know

Answers to the most common questions.

Your data stays with you

The extension reads your order history only when you click Export. Nothing is sent to us or to anyone else.

Opening the Library Viewer

Your data is passed inside Chrome, once, and deleted right after. If the Viewer says the export has expired, just export again.

Free games count too

Games you claimed for free appear with their list price and \$0 paid, so you can see how much you saved.

Bundles

When several games were bought in one order, the order's total, discount and tax are listed once, on the first game.

Prices and currencies

Amounts are in the currency you paid in. Totals for different currencies are never added together.

More help
